

Throughout my educational years, I have studied in many schools both in Estonia and Russia. I started my high school years at Anglo-American School of St. Petersburg in Russia until grade ten.

I successfully graduated from the IB Diploma Programme at English College in Tallinn.

I hold a Bachelor's degree from Tallinn University of Technology in the field of Applied Chemistry and Biotechnology. At the moment I am wrapping up my master's degree studies at Tartu University in Higher Science Education. I am experienced in teaching sciences and mathematics.

For four and a half years I worked as a math and science teacher and was the head of the Maths and Science department at Kadriorg German Gymnasium. Here I coordinated the work of my colleagues. I am actively participating in projects to help further the science education evolve and be more "technical".

My educational philosophy is that the teacher is a mentor, a supportive figure in studies and in growth for the students. Whenever there is a concern or a problem, a teacher can support the students in finding the best solution. I always listen to my students when they have something to propose or whenever they just need to talk to someone.
